

Problems with Supply-Chain Management

Currently, supply-chains face problems associated with a lack of trackability, transparency, and logistical unification. This leads to more opportunities for corruption, single points of failure, disparity between participants, and other inefficiencies during transactions, information flow, and interactions or exchanges between products and supply-chain members. Small to mid-sized businesses are struggling to adapt and expand into globalized marketplaces as they attempt to confront these logistical issues along their own growing supply-chain networks.

Our Industry-Transforming Solutions

SupplyBloc Technology is solving these issues by bringing unprecedented trackability, transparency, and logistical unification to supply-chain management with the use of blockchain technology, smart contracts, and an all-encompassing platform for communications, transactions, and exchanges between participants and products within a supply-chain network. We're creating a completely optimized and highly efficient flow of products and information from point A-to-B. We're helping businesses grow by streamlining the process of information and material exchange via blockchain integrated transactions and interactions along supply-chains.

Technology & Platform

SupplyBloc Technology uses blockchain, smart contracts, and application development platforms to revolutionize supply-chain infrastructure and management. This is primarily done by delivering unprecedented levels of transparency, trackability, and unification to all Growers, Producers, Manufacturers, Distributors, Transportation Service Providers, Wholesalers, Retailers, and Consumers or End-Users within a supply-chain network.

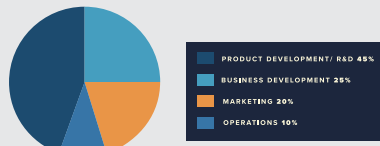

ICO & Token Sale Info

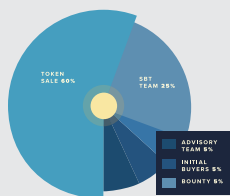

SUPX Token – An Integral Facilitator of Transactions, Incentives, & Rewards within the SupplyBloc Platform

- Start date for pre-ICO token sale: 12:00 AM (PST) on May 15th, 2018
- Soft cap = 1,000,000 USD
- Hard cap = 30,000,000 USD
- Exchange rate for SUPX tokens = 0.10 USD= 1 SUPX tokens
- Methods of payment accepted: BTC, ETH, LTC
- Total available token supply (max limit): 750,000,000
- Minimum purchase quality for tokens: 1,000 SUPX TOKEN

ICO Roadmap

Application Development

API Gateways & SDKs

SupplyBloc Technology offers API gateways and SDKs for participants in our system to develop customizable user-facing applications that run on our platform. This will allow any business within any industry to utilize our technology while maintaining complete autonomy over their user interfaces and application developments.

Example App Development Using SupplyBloc SDK

SupplyBloc Technology has developed Leaf, our turnkey user-facing application based on our Seed-to-Sale API & SDK, as an example of how members of the SupplyBloc platform can use our API gateways and SDKs to develop their own user-facing applications supported by SupplyBloc Technology. We plan to continue developing our API gateways and SDKs, as well as other turnkey solutions, to meet the growing variety of specific industry needs.
